

Reasons to go solar with Imagination

- Friendly, personal service from installer and the team at Imagination Head Office
- Full technical backup
- National network of professional installers
- No quibble guarantee
- Innovative Dutch design - tried and tested - system has been installed across Europe for over a decade
- Tested under UK Standards for solar water heating and awarded BS EN 12975
- Fast, professional installation
- Ethical business network - members of Solar Trade Association
- Team has extensive experience in solar and heating industries
- Offers off the shelf and bespoke design solutions

- Provides around 50% of hot water needs over the year
- Helps you leave a legacy by contributing to reducing carbon emissions
- Maintenance free. No scheduled service required. The new closed system is completely sealed, so no water is lost to evaporation, so the drain-back unit requires no topping up and no maintenance
- The flat-plate collector has a hi-tech, extremely efficient selective surface coating. This records a massive 96% absorption rate, emitting only 8% of the heat received
- Full safety features - boil and freeze protection. The system shuts off when light levels drop at dusk, and water drains back to storage unit. Automatic shut-off when maximum temperature of 80°C is reached in cylinder
- Elegant roof integrated design which is planning friendly - falls under same rules as roof lights eg. Velux
- Collector is fully vandal proof due to polycarbonate cover, and protected from UV degradation by special coating
- High levels of insulation on cylinder has zero ozone depletion potential, so is environmentally benign
- New twin coil cylinder included - highly recommended as it causes better stratification of heat in the cylinder. Therefore the system is allowed to perform to its best potential in conjunction with a back-up boiler
